

DRINKING WATER

Drinking water and irrigation, renovation of ponds, canals and other water bodies; digging of wells and tube wells; supplying drinking water through tankers to water scarce villages during summer-all these are looked well into by NALCO. NALCO renovated the water supply system in 13 villages, through Rural Water Supply & Sanitation(RWS & S) department of the government, spending more than 10 Cr. The company will also be creating four water bodies- two at Girang, one each at Kulad and Kandsar. The company has augmented pipe water supply to Kulad village through RWS & S. NALCO has taken a key initiative to solve endemic problem of fluoride contamination of water in Angul by making use of the revolutionary Nano technology.
