The job involves receipt of steel material from central stores, transporting it to the site, removal of damaged liner plates, fabrication of the new liner plates exactly as per the dimensions of the old ones and fixing arrangements like lugs, keys etc. as per instructions of the M-I-C. The plate thickness will be 8mm/10 mm/12 mm. Some time the parent plates of the chute may get damaged and in such cases the complete chute or its damaged side may have to be fabricated after cutting the damaged portion. Some time some patch may have to be welded over any punctured hole. Also some time the eroded liner plate may have to be reoriented to change the flow pattern of the coal.

For the above jobs the consumables like gas, welding rods etc. are to be arranged by the contractor at his cost. The welding rods to be used should be of reputed make like L&T, Advani, Orlikon, Essab, D&H only. The welding rods should be suitable for welding manganese steel plates (Advani make Overcord(s) is suitable for joining these liner plates). Steel materials shall be provided to the contractor free of cost. Damaged liners are to be shifted to designated scrap yard.
